

Opioid Crisis Strategy: From Short-Term Compliance to Long-Term Strategy

Satisfy prescriber CME requirements while enabling providers to highlight opioid care gaps to significantly improve clinical outcomes

As part of the national response to the opioid crisis, **the DEA and your state will soon likely require** prescribers of controlled substances to complete one to four hours of CMEs in pain management and opioid education similar to your neighboring states. With the increasing need to measure care value, payers are now enabling providers with a solution that immediately identifies opioid care gaps and highlights opportunities that decrease cost and risk.

OPIOID RISK ANALYTICS SOLUTION TO IDENTIFY OPIOID VARIANCE, MISUSE, AND RISK

We can help you gauge how your provider network is performing in the opioid crisis by applying more than 100 opioid quality indicators to identify provider performance gaps and how to address them. We can also help you identify providers that are performing below benchmarks.

Relias Analytics:

- Identifies providers whose prescribing data falls outside of clinical standards and best practices
- Identifies patients and their different levels of risk for the misuse and abuse of opioids
- Flags and assigns risk scores for patients at different levels of risk for opioid misuse or overdose
- Applies predictive modeling based on claims data determining which practices have the biggest risk for misuse
- Clinical Considerations are offered as next steps to mitigate high risk scores and variance

PRESCRIPTIVE CMEs WITH RELIAS OPIOID CLINICAL SOLUTION

After identifying which providers are performing below benchmarks and whose prescribing data falls outside of clinical standards best practices, mitigate the variance by educating the provider via the accredited Relias Opioid Clinical Solution, *Preventing Opioid Misuse and Abuse*. It is a focused learning program designed to improve provider habits with a start-to-finish path of courses, including scenario-based challenges and assessments, that target opioid care gaps and enables care coordination opportunities for providers.

Relias Opioid Clinical Solution:

- Identifies low/high performing providers based on key metrics
- Provides CME-accredited training to improve skills while satisfying federal or state mandates
- Includes a provider follow-up assessment to demonstrate improvement
